NEW 16MP High Definition Color Camera Available from UNITRON

Commack, NY [November 28, 2017] —UNITRON Ltd. is pleased to introduce the MPX-16C 16-megapixel color microscopy camera, the latest addition to the *Excelis* line of microscope cameras. Boasting extraordinary color and high resolution on any microscope, the MPX-16C is the latest “must have” imaging device for microscope users in industry, manufacturing and life sciences.

The MPX-16C (CAT# AU-16-CMOS) features dual FPGA processors to generate exceptional color reproduction, and fast data communication to the computer through its built-in USB 3.0 connectivity. With 16 megapixels, the MPX-16C delivers high resolution from low to high magnifications, allowing the capture and visualization of even the finest details of the specimen. The MPX-16C comes with *CaptaVision* software, and the industry-standard C-mount allows the camera to be added to any camera-ready microscope (0.5x c-mount adapter recommended). “This is a superb camera, delivering excellent performance for our price-conscious customers,” says Brian Taub, Executive VP at UNITRON. “The features of the MPX-16C are typically found in cameras costing much more, yet this camera generates great images across application areas, even fluorescence.”

The new *Excelis* MPX-16C 16-megapixel color microscope camera is available now from UNITRON. For more information, visit the product pages at <http://www.unitronusa.com/products/digital-imaging/excelis-cmos>.
